
Program

The best wetting agent for dry patch control programs. Prevents and blocks the development of damages caused by dry spots

BENEFITS

- Balances soil moisture across turf surface, levelling grass growth. Produces fast, dry and uniform greens, offering perfect putting conditions
- Ideal for prevention and control of soil hydrophobicities and persistent localized dry spots (LDS)
- Powerful infiltrating agent, allows water to penetrate even into the densest green and fairway swards such as last generation bents, dwarf bermudagrass and paspalum
- Can be used for curative treatments on visible symptoms, or managed in a preventive program (calendar treatments) with intervals up to 5-6 weeks
- Safe on all types of turfgrass; does not interfere with microbial soil life
- Possesses a very rapid action for a prompt stress recovery for 30 days; ideal both for localized and extensive applications

TECHNICAL FEATURES

87,3% Polyethylene-Polypropylene Glycols-Block Copolymer

3,75% Dioctyl sulfosuccinate sodium

Superior, new technology concentrated surfactant with infiltrating and hydrating action. It is indicated for programmed preventive treatments against dry spots (Localized Dry Spot) with intervals of 4-5 weeks but can also be used for curative treatments with symptoms already visible.

APPLICATION METHODS:

For monthly preventive treatments on dry patches and in presence of visible symptoms: 15 liters/ha in 850-1000 lt. of H₂O (0,75 liters in 35-50 liters of H₂O on 500 m²), starting from late Spring (May). Repeat every 4-5 weeks

Recommended water-in after treatment.

PACKAGING: 5 liter drums

The Herbatech logo consists of the word "Herbatech" in a white, serif font, set against a dark green rectangular background with a slight shadow effect.
