

Herbacleen

Detergent for removing paints and persistent chemicals from Herbasprayer and Herbalance sprayers and from all spraying tools

BENEFITS

- Particularly studied to remove the residues of Herbafer pigments and paints, iron sulphate and persistent pesticide residuals such as sulphonylureas, glyphosate, 2,4D, MCPP, MCPA etc.
- Recommended for removing chemicals and paints from Herbasprayer sprayer and Herbalance lance
- Its action does not depend from a single detergent or solvent but from a mixture of sequestrant agents, surfactants and detergents that act in synergy on the removal of impurities
- It is a safe, efficient, effective and not phytotoxic product; can be used to wash external tools too
- It is indispensable after treatments with glyphosate and iron sulphate or when it is necessary to switch from an herbicide to a fungicide or a foliar fertilizer
- With the aim of maintaining tools in perfect conditions, its utilization is indispensable during the final cleaning of the year of all spraying tools.

TECHNICAL ASPECTS

Powerful liquid formula specific for the removal of deposits of oily colorants, pesticides and other residues (iron sulfate) from spraying equipment: spray tanks, bars, connection pipes, filters, grill shields, line marking machines and nozzles

APPLICATION METHODS

With pesticides, foliar fertilizers and pigments: 500 ml. of Herbacleen in 100 lt. H₂O.

With paints, iron sulphate and very oily, sticky and persistent chemicals: 750 ml. of Herbacleen in 100 lt. H₂O.

Important: washing must be done immediately after the treatment when the product has not yet dried on the walls of the tank.

1. After spraying, empty completely the tank accurately washing it with running water after that the surface and the internal have been covered with a water plus Herbacleen solution (50 ml. in 10 lt H₂O). Empty it again.
2. Fill half tank with water, adding Herbacleen at a dosage recommended. Agitate and eject the solution from the pipes and from the bar until it starts coming out from nozzles. Take down the nozzles and completely re-empty the tank with water, agitating it for 15 minutes. Eject all the solution through the pipes and the bar, completely emptying the tank.
3. Nozzles and filters must be removed and cleaned aside, dipping them in a container filled with a solution of 250 ml of Herbacleen into 10 lt. of H₂O.
4. Rinse the tank with water inside and outside, completely emptying it.

PACKAGING: One liter bottles
